Street, Sriperumbudur,
Kanchipuram-602105

SOFT SKILLS

- Teamwork
- Time Management
- Leadership
- Creativity
- Critical Thinking

TECH SKILLS

- Python (Intermediate)
- C Programming (Basic)
- C++ (Intermediate)
- Data Structures
- SQL, MySQL
- Microcontroller Interfacing
- Web Development

INTERNSHIP

Kaynes Technology India Ltd.
Production Department – EMS

- Gained hands-on exposure to Electronics Manufacturing Services (EMS) and production processes.
- Performed wire harness assembly, wire cutting, stripping, and crimping as per wiring diagrams.
- Conducted continuity and short-circuit testing using a digital multimeter.
- Followed quality standards and production guidelines

LANGUAGES

- English (Fluent)
- Tamil (Fluent)
- Telugu (Speaking)

K.R.KIRUTHICK KUMAR

ELECTRONICS AND COMMUNICATION ENGINEER

PORTFOLIO: [HTTPS://KIRUTHICK-KUMAR-PORTFOLIO.VERCEL.APP](https://kiruthick-kumar-portfolio.vercel.app)

PROFILE

Motivated Electronics and Communication Engineering student with a strong foundation in embedded systems, IoT, robotics, and emerging AI technologies. Experienced in developing technical projects and implementing practical engineering solutions. Possesses strong analytical, problem-solving, and teamwork skills, with a commitment to continuous learning and innovation. Seeking opportunities to apply technical expertise, contribute to industry-oriented projects, and grow professionally in a challenging engineering environment.

EDUCATION

Bachelor of Electronics and Communication Sri Venkateswara College of Engineering	2024 - 2028
Ryan International School Higher Secondary	2022 - 2024
Montfort [CBSE] School Secondary School	2021 - 2022

PROJECTS

Sensor-Integrated Rover For Monitoring Inaccessible Areas

Developed an Arduino-based rover equipped with ultrasonic, DHT11, GPS, Motion, Vision(ESP32 CAM), Gas sensors to monitor and collect data in hazardous/inaccessible regions. It enhances safety by removing humans from harm's way and improves efficiency in data gathering. Designed robust hardware integration to ensure reliable operation in rough terrains.

IOT-Based Realtime Livestock Health Monitoring System

Developed an IoT-based livestock health monitoring system using ESP32 to track heart rate, temperature, humidity, and animal movement in real time. Implemented wireless data transmission to a cloud dashboard (Flutter) for continuous monitoring and early health alerts.

IOT-Based Realtime Livestock Health Monitoring System

Developed an ESP32-based robotic system designed to transport small items between predefined campus locations. Integrated motor control, ultrasonic sensors, and a servo-operated storage compartment for obstacle detection and secure item delivery. Focused on reliable navigation, automation, and efficient campus logistics.

ACHIEVEMENTS & HACKATHONS

- Achieved Grade-A in Python Programming, demonstrating strong problem-solving and clean coding skills
- Secured 1st Place in the Tech Tank event at UPAGRAHA '26, a national-level technical symposium
- Designed and developed multiple embedded systems and IoT projects using ESP32 and sensor integration.
